Dear eNews Reader,
Dear Customer,

In times of lesser optimism on the economical situation, it is good to know to which community of software users you belong. **You have many colleagues that rely on one of the Nemetschek main software brands.** A majority of architectural projects has been conceived with one of the 3 Nemetschek products: **Archicad** (Graphisoft), **Vectorworks** or **Allplan**. As well on MAC as on Windows the offer by Nemetschek into architectural modelling is the absolute top. The offer is also broad, going from conceptual design, landscaping, architectural detailing and execution drawings.

Engineers have a part of their work shared with architects, especially for the design of buildings. **The Nemetschek Engineering Group has different brands:** for engineering design Nemetschek offers **Scia Engineer** and **Frilo Statics**, for engineering detailing (mainly concrete structures) there is **Allplan Engineering** and **-isb cad-** (Glaser). For fabrication Allplan has dedicated extensions (**Allplan Precast**).

Archicad

Vectorworks

Allplan

Maxon

There is one common factor in all programs: they have been made by professionals for professionals (architects to architects, engineers to engineers). Nearly all programs can exchange full 3D models with each other thanks to the IFC international data exchange standard.

Within Nemetschek there are more companies which have applications for facility management, and for cost calculations (pre- and post). Yet the most visual one is **Maxon**; with the software Cinema4D all animations come into action.

And the Nemetschek world is not closed; it is a multipluralist company that links up with all other brands in the world. Enjoy the visual world of Nemetschek in 2009!
