

January 2012

## Best New Year's wishes to all our eNews Readers!

Dear eNews reader,

Today, changed conditions influence the decisions and operations of your businesses. The major construction activities take place in Asia, South America, Middle-East, Turkey, Russia and further. It demands extra efforts to be internationally active and to assemble experience and know-how in local demands and codes. The same applies for our company Nemetschek Scia. We have to step up our efforts to become a global player in structural software. Having clients in over 50 countries, over Europe, America and the Middle East we are increasing our efforts in the Eastern direction.

Besides internationalization there are more challenges to overcome the downturn of the economy. The construction industry is traditionally fragmented and often unproductive; it is Nemetschek's mission to **improve** drastically the process from design to construction. With our software we bring **solutions** to improve interoperability and support new construction methods through Building Information Modelling (so named BIM).

I sincerely hope that you will join us in the Year **2012** for sharing innovations and experiences.

In the name of the entire Nemetschek Scia team I wish you a **Happy New Year**.

**Jean-Pierre Rammant**  
CEO Nemetschek Scia
