Dear eNews Reader,

Nemetschek Scia is very attentive to **interoperability** with other information technology in the **AEC sector** (Architecture, Engineering, Construction). As a member of the globally operating Nemetschek Group, the **Scia Engineer product managers** are working closely on **openBIM** with sister companies like **Graphisoft, Nemetschek VectorWorks** and **Nemetschek Allplan** to improve the engineering process flow and they also collaborate with industry leaders such as **Tekla** and **Autodesk**.

To continue co-supporting the steady progress of openBIM and its construction software industry standard IFC, Nemetschek Scia is extending the product portfolio with 2 new proven products: a Cloud File Team Server '**Scia Desk**' and a Model Checking technology, based on IFC, for design quality assurance and analysis: '**Solibri**'.

Nemetschek Scia launches Scia Desk, a New Cloud Service

Working in a **project team** means **sharing data**. It is essential to keep all project related data **safe** and **in sync** with your internal and external project partners, without worrying about the technical communication details. **Scia Desk** is a secure and user friendly platform for storing and sharing data with colleagues, customers, engineers, architects, contractors and other partners. Whether on-line or off-line, in the office or on the road... your data is always up-to-date, synchronized and securely backed up.

Scia Desk offers an easy way to consolidate valuable project and/or calculation documents, to back them up and to synchronize them across multiple computers. Scia Desk is a cost-effective and secure solution to share files inside and outside the company. Without the need to add large attachments to emails which block your mailbox.

Just send a FileLink or FolderLink to your projectpartners for downloading the files at their own pace and time. And if you want colleagues to have up-to-date access to your files, just invite them as a guest on your fileserver. Changes will be replicated automatically to all members. View, share and access your project files on-the-go. Scia Desk is also available for iPad, iPhone, Android and BlackBerry. We tackle your challenge of mobile device support. If you have another device, just use your mobile browser and access your files at <http://mysciadesk.com> via any browser.

Scia Desk is the most affordable way for professionals to secure, back up and share data. It offers all the benefits of a VPN, FTP and back-up system **without the infrastructure investment**. Scia Desk eliminates the cost of expensive servers, complex software or need for IT expertise without any user limitation, nor storage per team file server. Enter the cloud community with Scia Desk - start here... It works for all kinds of files: Scia Engineer, Allplan Engineering, other CAE-CAO software, documents, presentations...

It is economical and effective. [Download our brochure](#) or go to the [Nemetschek Scia Webshop](#) and Try Scia Desk for Free during 14 days!

Promotion:

Until the end of 2011 subscribers to a 1 year Team FileServer will receive an iTunes Gift Voucher worth 10 Euro; this on top of a 2 months free access.

Nemetschek Scia announces a new partnership signed with Solibri

Nemetschek Scia presents a new partnership with Solibri, Inc., the market leader in Model Checking technology for **design quality assurance and analysis**, based on IFC. The partnership strengthens the international open BIM philosophy, supported by the Nemetschek Group.

About Solibri

Solibri, Inc. is the **global leader** in BIM quality assurance and quality control, providing outside the box tools for BIM validation, compliance control, design process coordination, design review, analysis, and code checking. Solibri's corporate mission is to develop and market quality assurance solutions that improve the **quality of BIM based design** during the entire design and construction process.

**BIM quality assurance**

The Solibri solution is focusing on helping organizations to adopt **Building Information Modelling** faster, easier and with less expense than other BIM solutions. With the help of Solibri, Nemetschek Scia customers will be able to move faster in realizing the BIM benefits and enjoying a high return on their investment.

Solibri Model Checker TM is an essential tool in open BIM that analyzes IFC models for integrity, quality, and physical security. Solibri Model Checker X-rays the building model and reveals potential flaws and **weaknesses** in the design, highlights the **clashing components** and checks that the model complies with the **building codes** and the organization's own **best practices**.

Focus on Engineering

Engineers play an essential role in the BIM process. Nemetschek Scia, together with Solibri, will focus on the **Engineering market**. With Solibri added to our services, Nemetschek Scia can provide engineers with a full solution that allows them to **really take part** in the BIM process from their expertise perspective. Engineers will have extra tools at their hands that visualize and check structural

engineering models. Rule sets, especially created for checking the structure, will make structural BIM easier and faster.
